

Kampa® POP AIR PRO

For Models:

Pop AIR Pro 260, 290, 340 & 365

Addendum - Keder Beading Adjustment for Eriba

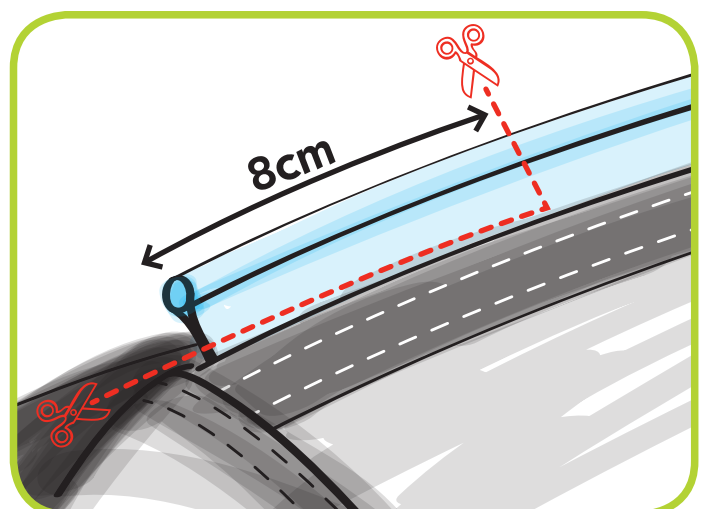

The Pop AIR is designed to be a universal fit for pre-2010 and post-2010 Eriba Touring caravans. The roof profile on Eriba caravans pre-2010 is different to that on post-2010 models; the straight section of the awning rail/channel is shorter post-2010.

It is common for the slot in the awning rail/channel to become slightly wider where the rail curves around the front and rear shape of the Eriba. The widened slot may result in the keder beading being loose or pulled out at the ends where the awning rail/channel starts to curve away.

This does not affect the security of the overall fitment of the awning to the caravan.

If preferable, the ends of the keder beading can easily be trimmed back. We recommend removing 8cm from both sides.

Please note that your warranty **WILL NOT** be affected if you choose to make this alteration as per these instructions.
